

EVAN PARNELL

DIRECTOR OF OPERATIONS | OPERATIONAL EXCELLENCE

Annapolis, Maryland | (443) 294-5481 | efparnell@gmail.com | [LinkedIn](#)

EXECUTIVE PROFILE

Organizations eventually reach a point where growth begins to outpace the systems that made it possible. I partner with founders and CEOs at that inflection point, strengthening leadership capacity and building the operating systems required for sustainable growth.

Across startups, regulated laboratories, multi-site operations, software development, and e-commerce, I have repeatedly translated strategy into operational capability by designing accountable organizations, simplifying complex workflows, aligning people and technology, and institutionalizing scalable business processes.

I am most effective as a CEO's operational partner—diagnosing organizational constraints, building what is missing, and leaving companies more capable, resilient, and prepared for their next stage of growth.

CAREER HIGHLIGHTS

- Built operational systems supporting organizations ranging from startups to multi-site enterprises with **300+ employees** and **\$10M operating budgets**.
 - Raised more than **\$1M in startup financing** while leading laboratory development from concept through accreditation and operational launch.
 - Designed enterprise pricing and commercial systems supporting hundreds of supplier catalogs, customer contracts, and e-commerce channels.
 - Implemented **ISO 9001** and **ISO 17025** quality systems across regulated laboratory environments.
 - Built leadership, governance, and operational infrastructure enabling organizations to scale beyond founder-dependent execution.
-

PROFESSIONAL EXPERIENCE

GivMoo, LLC | Co-Founder & Chief Operating Officer

2025 - Present

Built the operational foundation for a first-of-its-kind e-commerce platform enabling nonprofit organizations to generate sustainable recurring revenue through everyday consumer purchases.

- Established the governance, operating disciplines, and commercial architecture required to transform an innovative concept into a scalable operating business.
- Positioned the organization for growth by replacing person-dependent execution with durable operating systems capable of supporting long-term scale.

Stellar Scientific, LLC | Director of Business Analytics**2025–Present**

Brought in to redesign the commercial operating system of a national scientific distributor, transforming an annual manual pricing process into a scalable enterprise capability.

- Developed an enterprise pricing platform integrating supplier catalogs, customer contracts, and e-commerce channels into a unified operating system.
- Positioned the organization for long-term commercial agility by embedding pricing logic, workflow automation, and scalable business rules into repeatable processes.

Green Analytics MD, LLC | Associate Laboratory Director**2021–2026**

Strengthened the organization's management capacity by developing the leadership systems, business processes, and organizational infrastructure required to support sustainable growth across eight locations, a \$10M operating budget, and more than 300 employees.

- Extended operational discipline beyond ISO 17025 by designing the business processes and governance structures required to manage the enterprise, not just the laboratories.
- Established scalable leadership infrastructure that improved accountability, employee retention, and organizational resilience.

Atlas Labs FL, LLC | Co-Founder & Managing Partner**2019–2021**

Co-founded and developed a greenfield analytical laboratory, leading every aspect of the business from market selection and financing through facility construction, accreditation, and operational readiness. The experience fundamentally reshaped my approach to building organizations, reinforcing that operational excellence creates value only when paired with validated market demand and disciplined commercial execution.

- Directed the complete development of a startup analytical laboratory, securing more than \$1M in financing while leading market selection, facility construction, equipment procurement, accreditation, and operational readiness.
- Learned firsthand that exceptional execution cannot overcome insufficient market demand, fundamentally reshaping my approach to organizational design by placing market validation alongside operational excellence.

Atlantic Test Labs, Inc. | QA Manager | Associate Lab Director**2017–2019**

Led the launch of an ISO 17025 analytical laboratory serving Maryland's emerging regulated cannabis industry, establishing the technical, quality, and operational systems required to transition from startup to sustainable commercial operations. The experience reinforced that exceptional technical organizations achieve lasting success only when disciplined operating systems are aligned with commercial execution.

- Directed implementation of the laboratory's ISO 17025 quality management system while directing startup activities including equipment selection, workflow design, documentation, personnel training, and regulatory readiness.
- Helped restore operational momentum during a leadership transition, contributing to a 30% increase in sales and a 40% reduction in operating costs over four months.

Atlantic Technical Services, Inc. | Field Service Tech | Tech Manager | QA Manager 2012–2017

Joined a \$400K field services company as a field service technician before progressively assuming technical and operational leadership roles, helping transform the organization into a diversified laboratory business that was ultimately acquired in 2019.

- Led technical field operations supporting certification, testing, and maintenance of mission-critical HEPA and HEGA filtration systems serving hospitals, pharmaceutical manufacturing, research laboratories, and government facilities.
- Re-engineered the organization's operating systems following an unsuccessful external audit, implementing ISO 9001 and rebuilding procedural infrastructure that strengthened organizational capability.

Dann Marine Towing | Able Seaman / Deckhand

2010–2012

Served aboard a 100-foot ocean-going tug towing fully loaded 400-foot barges throughout the Gulf of Mexico, Mississippi River, and the U.S. East Coast. Operating within a five-person crew where technical competence, preparation, and collaboration directly influenced mission success developed the systems mindset, operational discipline, and sound judgment that became the foundation of my approach to organizational leadership.

- Collaborated with vessel leadership to improve operational effectiveness by designing and implementing navigation workspace enhancements, integrating electronic navigation systems, and executing technical improvements that strengthened day-to-day vessel operations.
- Developed disciplined decision-making under pressure while operating in environments where severe weather, equipment failures, and evolving operational conditions demanded calm judgment, adaptability, and coordinated execution.

United States Navy | Surface Warfare Officer (Division Officer)

2008–2010

Following graduation from the United States Naval Academy, reported aboard USS McFaul (DDG-74) and immediately deployed to the Mediterranean. Serving in a high-tempo operational environment provided an early appreciation for disciplined execution, accountability, and the demands of leading within complex organizations, while the challenges of this period ultimately shaped the resilience and adaptability that defined the next stage of my career.

United States Naval Academy | Bachelor of Science, Chemistry

2004–2008

Completed one of the nation's most rigorous undergraduate leadership programs while preparing for commissioned naval service. The Academy's combination of academic intensity, military discipline, engineering-based problem solving, and continuous leadership development established the analytical framework and systems-oriented approach that have guided my career ever since.
