

Dear Cobalt Service Partners Hiring Team,

I am applying for the Vice President of Operational Excellence position because it brings together the work I have done throughout my career: improving technical field-service operations, building scalable operating systems, developing leaders, and using data and technology to produce measurable business results.

At Atlantic Technical Services, I advanced from field service technician into technical and quality leadership within a five-technician, three-vehicle controlled-environment service operation. I directly managed dispatch, scheduling, workload balancing, job execution, technician utilization, and the labor and material inputs affecting quoted work and service margins. Although the operation was modest in size, the experience gave me firsthand understanding of the practical economics of dispatched labor and the operational discipline required to deliver technical work profitably.

I subsequently applied those principles across larger and more complex organizations. At Green Analytics, I built management systems, governance, workforce-development processes, and repeatable operating routines supporting eight locations, a \$10 million operating budget, and more than 300 employees. At Stellar Scientific, I re-engineered national pricing operations by mapping supplier, customer, contract, and pricing dependencies into an automated operating platform that improved consistency, reporting, and margin visibility. I have also launched regulated facilities, led cross-functional operating initiatives, restored performance during leadership transitions, and developed managers capable of sustaining improvements without constant executive intervention.

Cobalt's emphasis on field productivity, margin discipline, technology adoption, and replicable operating improvements strongly matches how I approach operational excellence. My direct dispatch experience was at a smaller scale than Cobalt's current platform, but it is reinforced by more recent experience building systems across decentralized, multi-site organizations. I would welcome the opportunity to discuss how that combination of frontline credibility and enterprise operating discipline could support Cobalt's continued growth.

Sincerely,

Evan Parnell
